

Our Quality Policy

At **Ignitarium**, we provide value-added services and solutions in the product engineering area, leveraging our expertise in Semiconductors, Embedded software, Multimedia, Digital signal processing, Machine Learning, enabling and inspiring impactful products for our customers.

In this endeavor, we are committed to function as a responsible, client-focused and ethical organisation, and shall strive to work towards ensuring the satisfaction of its diverse stakeholders, by consistently delivering value and quality.

We believe that a proactive process definition and risk-based evaluation across all our processes should encourage and enhance cohesion with every stakeholder, and help in building strong and lasting business relationships.

We intend to achieve that:

- By measuring critical health indicators in projects and use the observations to
 - (1) effectively track, manage and converge the project objectives, and
 - (2) attempt and achieve continuous improvement on delivery efficiency & effectiveness.
- By continually questioning the status quo in upgrading and improving our quality management system.
- By enabling our teams to stay abreast of advancements in applicable technology areas, engineering practices, and development methodologies, through thoughtful team development plans.
- By committing to satisfy legal and other applicable requirements.
